

How to create psychological safety

“There’s no team without trust,” says Paul Santagata, Head of Industry at Google.

Paul carried out a massive two-year study on team performance, which revealed that the highest-performing teams have one thing in common: psychological safety, the belief that you won’t be punished when you make a mistake.

Studies show that psychological safety allows for moderate risk-taking, speaking your mind, creativity, and sticking your neck out without fear of having it cut off these types of behavior lead to market breakthroughs or to great results in sports teams.

Ancient evolutionary adaptation explains the implications of having (or not) psychological safety in certain environments, the process is:

1. A provocation by a boss, competitive coworker, or dismissive subordinate as a life-or-death threat.
2. The amygdala, the alarm bell in the brain, ignites the fight-or-flight response, hijacking higher brain centers.
3. The brain structure shuts down perspective and analytical reasoning as it is implementing a “act first, think later” response.

The result is that just when we need it most, we lose our minds. While that fight-or-flight reaction may save us in life-or-death situations, it handicaps the strategic thinking needed in today’s workplace.

These days we depend on another system – the broaden-and-build mode of positive emotion, this enables us to solve complex

problems and foster cooperative relationships.

Research indicates that positive emotions like trust, curiosity, confidence, and inspiration broaden the mind and help us build psychological, social, and physical resources. We become more open-minded, resilient, motivated, and persistent when we feel safe. Humor increases, as does solution-finding and divergent thinking – this is the cognitive process underlying creativity.

When the workplace feels challenging but not threatening, teams can sustain the broaden-and-build mode. Oxytocin levels in our brains rise, eliciting trust and trust-making behavior. This is a huge factor in team success.

So how can you increase psychological safety on your team? Here are some steps:

Approach conflict as a collaborator, not an adversary.

We humans hate losing even more than we love winning. A perceived loss triggers attempts to reestablish fairness through competition, criticism, or disengagement, which is a form of workplace-learned helplessness. Santagata knows that true success is a win-win outcome, so when conflicts come up, he avoids triggering a fight-or-flight reaction by asking, “How could we achieve a mutually desirable outcome?”

Speak human to human.

Underlying every team’s who-did-what confrontation are universal needs such as respect, competence, social status, and autonomy. Recognizing these deeper needs naturally elicits trust and promotes positive language and behaviors. Santagata reminded his team that even in the most contentious negotiations, the other party is just like them and aims to walk away happy. He led them through a reflection called “Just Like Me,” which asks you to consider:

1. This person has beliefs, perspectives, and opinions,

- just like me.
2. This person has hopes, anxieties, and vulnerabilities, just like me.
 3. This person has friends, family, and perhaps children who love them, just like me.
 4. This person wants to feel respected, appreciated, and competent, just like me.
 5. This person wishes for peace, joy, and happiness, just like me.

Anticipate reactions and plan countermoves.

“Thinking through in advance how your audience will react to your messaging helps ensure your content will be heard, versus your audience hearing an attack on their identity or ego,” explains Santagata.

Skillfully confront difficult conversations head-on by preparing for likely reactions. For example, you may need to gather concrete evidence to counter defensiveness when discussing hot-button issues. Santagata asks himself, “If I position my point in this manner, what are the possible objections, and how would I respond to those counter arguments?” He says, “Looking at the discussion from this third-party perspective exposes weaknesses in my positions and encourages me to rethink my argument.” Specifically, he asks:

1. What are my main points?
2. What are three ways my listeners are likely to respond?
3. How will I respond to each of those scenarios?

Replace blame with curiosity.

If team members sense that you’re trying to blame them for something, you become their saber-toothed tiger. John Gottman’s research at the University of Washington shows that blame and criticism reliably escalate conflict, leading to defensiveness and – eventually – to disengagement. The alternative to blame is curiosity. If you believe you already

know what the other person is thinking, then you're not ready to have a conversation. Instead, adopt a learning mindset, knowing you don't have all the facts. Here's how:

1. State the problematic behavior or outcome as an observation – use factual, neutral language. For example, "In the past two months there's been a noticeable drop in your participation during meetings and progress appears to be slowing on your project."
2. Engage them in an exploration. For example, "I imagine there are multiple factors at play. Perhaps we could uncover what they are together?"
3. Ask for solutions. The people who are responsible for creating a problem often hold the keys to solving it. That's why a positive outcome typically depends on their input and buy-in. Ask directly, "What do you think needs to happen here?" Or, "What would be your ideal scenario?"

OR

"How could I support you?"

Ask for feedback on delivery.

Asking for feedback on how you delivered your message disarms your opponent, illuminates blind spots in communication skills, and models fallibility, which increases trust in leaders. Santagata closes difficult conversations with these questions:

1. What worked and what didn't work in my delivery?
2. How did it feel to hear this message?
3. How could I have presented it more effectively?

Measure psychological safety.

Periodically check in with your team as to how safe they feel and what could enhance their feeling of safety.

Ask the question: "How confident are you that you won't receive retaliation or criticism if you admit an error or make

a mistake?"

If you create this sense of psychological safety on your own team starting now, you can expect to see higher levels of engagement, increased motivation to tackle difficult problems, more learning and development opportunities, and better performance.
